

AMENDMENTS
In the Specification

Page 6

The program resource and outcomes evaluation system in an automated system that again allow students, program personnel, graduates and ~~employees~~ employers to enter evaluation information or data into a database subsystem via a global computer network such as the internet or intranet networks connecting a select set of computers. This allows for program faculty to automate the data collection process used for accreditation annual reports and self-study programs.

Page 24-25

The numerical summary function **1240** and comments function **1242** each include a select type step **1244**, where the faculty member selects the type of data desire, *e.g.*, student, graduate, ~~employee~~ employer or program personnel. Once a selection has been made, the function **1240** and **1242** generates and displays a the selected records in a generate and display step **1246**. The displayed data is obtained via the middleware which determines the count of each rating (1 to 5), percentage of each rating, the total number of responses, mean, median, standard deviations and other statistical data as well as the number of NA (not applicable) results and the number of blank entries. The faculty member can then select a particular record in a select step **1248** which is then displayed in a display step **1250**.
